WARNING E. coli results greater than or equal to 190 poses an increased risk of swimmer-related illness. The US EPA has established an advisory level of **190cfu/100 ml** (cfu = colony forming units) for E. coli. Please contact the Menasha Health Department at (920) 967-3522 if you should have any questions regarding this information.

August 29, 2014 – Beach re-opened following 2 consecutive samples <190 CFU

June 26, 2014 – All City of Menasha Inland Water Access points have been posted with CAUTION statements related to the presence of Blue-Green Algae (Cyanobacteria). Blue-green algae poses potential health concerns for humans and animals. Bathers may experience eye, ear or skin irritation. Some Blue-green algae can also produce poisons or toxins. Exposure to large amounts of these toxins can cause liver and/or nervous system problems. Pets should not be allowed to swim or drink from posted waters, it is also recommended that people not swim in waters with visible algae mats. Individuals should shower as soon as possible after swimming in any posted waters. Please contact the Menasha Health Department at (920) 967-3522 if you have any additional questions or require additional information. If you feel either a person or pet have been exposed and are experiencing health symptoms consult your medical provider as soon as possible.
